

County of Nemaha, Nebraska

ANNUAL DUST CONTROL PERMIT

This permit is issued to allow application of temporary dust control on the county rock road system and is subject to the conditions set forth as follows: All dust control permits must be submitted each year to the County Board of Commissioner's office.

The County Board must be notified and the application for dust control coordinated with the County prior to the application to prepare the road surface. ALL dust control must be applied AFTER the County has repaired the road surface; this includes the 2nd application. After notification to applicant, dust control contractors shall apply dust control within 48 hours, weather permitting. The County shall not be held responsible in the event contractors apply dust control products prior to preparation of the road surface. Early application of dust control or applying dust control without coordinating application with the County may result in the blading of that section of roadway as the County deems necessary. Re-applications will be at the cost of the applicant.

The permit holder is responsible for obtaining a dust control contractor and the contractor's application fee. Calcium Chloride is the preferred dust control application in Nemaha County, Nebraska.

If only 1 Application is applied:

90 days after the application is applied the maintenance of the road shall revert back to Nemaha County to be maintained.

If 2 or more Applications are applied:

On October 1st the maintenance of the road shall revert back to Nemaha County to be maintained.

Policy on Grading:

Applicants shall be given ONE warning call by the County Board to fix potholes on any dust control. If the roadway is not fixed within 5 business days, the County shall use a maintainer to restore a safe roadway.
